FACTS about Connecticut Women

introduction

Introduction

The purpose of this publication is to provide reliable information regarding the status of Connecticut women to legislators, other policy makers and the general public. We are pleased to present data regarding demographic characteristics, family composition, labor force participation, rates of poverty, educational attainment, women in criminal justice and women owned businesses.

The data we present here are not meant to be exhaustive or complete. There are many types of information or social indicators that we have not included; this is meant to be a useful sampler of information. Each year the PCSW updates this information with more recent data, where available, and with special topical supplements.

Since updated census information has just been released, this edition is a comprehensive look at eight issue areas.

It is impossible to fully describe human lives with charts and tables. However, good information does allow us to think more clearly about the patterns and trends that shape and sometimes limit people's lives. We hope that policy-makers and members of the public will use the data in this book as a reference, and will call upon the staff of the PCSW to provide additional information when it is needed to analyze social issues that affect the status of women.

FACTS about Connecticut Women

Chapter One

General Demographics

chapter one

page 7

FACTS about Connecticut Women

demographics

General Demographics

In 2000, there were nearly 1.8 million women in Connecticut. According to the 2000 *Connecticut Census Data*, the estimated population of Connecticut as of April 1, 2000 was 3,405,565. Of the total population 48% are males and 52% are females. The median age is 37.4. In the age groups from 0 through 29 years, the number of males exceeded that of females. In all subsequent 5-year age cohorts, females exceeded males. By the age groups 75 - 79, 80 - 84, and 85+ years, females outnumbered males by factors of 1.8, 1.7, and 2.6 respectively.¹

Connecticut has the 29th largest population among all the states in the United States.²

Life expectancy in the United States has hit a new high. Among the total population, the average American could expect to live to 76.9 years as of 2000 -- up from 75.8 as of 1995. Among whites, life expectancy for American men is now 74.8 years and 79.5 years for women. Black men live an average of 68.3 years, and black women live 75.0 years.³

As the "baby-boom" generation (those born between 1946 and 1964) starts reaching retirement age in 2011, the size of the elderly population (ages 65 and over) is projected to increase substantially in all states. Compared with the United States as a whole, Connecticut will continue to have a slightly larger proportion of women over age 65 and a higher ratio of women to men.⁴

FACTS about Connecticut Women

Total Population

While Connecticut's population has grown by nearly 300,000 from 1980 to 2000, the proportion of males and females has remained relatively consistent across this twenty-year span. Overall, Connecticut's population has decreased by 297,989. Women consistently make up over 50% of Connecticut's population according to the U.S. Census.

demographics

Homelessness

In Connecticut, the Coalition to End Homelessness reports that during the period October 2000 to September 2001, 16,513 different people used shelters. This includes 13,600 adults, 1,520 families with 2,913 children. Children age 17 and under represented 18% of the total population using shelters. Of the families, 87.6% were single female parents, 8.6% were two-parent families and 3.3% were single male parents.¹

FACTS about Connecticut Women

demographics

The Sandwich Generation

People today are living to older ages, a change that has people working, raising children, and caring for older adults who also need care. Almost one out of every four households in Connecticut is involved in giving care to a person aged 65 and older.

Connecticut's Elderly 2000

3,405,565 Total Population

The "Sandwich Generation" refers to the 25% of people over 40 years old who are juggling the responsibilities of raising their own children and caring for a parent or any other older relative.

The average age of family caregivers is 46 years old, and approximately 75% of those who provide care are female.

Source: Family Caregiver Alliance Factsheet: Selected Caregiver Statistics and AARP Caregiving, Involving Others

page 18

FACTS about Connecticut Women

The Sandwich Generation continued

Who takes care of the elderly?

Caring for both elderly relatives and children affects women in many different ways:

- Twenty hours a week is spent providing care, on average. Studies have shown that female caregivers spend 50% more time supplying care than male caregivers.
- Over 50% of all caregivers are employed full time. Two-thirds are employed either full or part time. Some caregivers report having to decrease hours at the job, rearrange schedules, or take unpaid leave to meet the responsibilities of caring for another person. Caring for elderly relatives can result in less income, which causes more stress for the caregiver.
- Caregivers experience an array of emotions, including love, burn out, stress, and depression. 49% of all caregivers experience depression and report using prescription drugs for anxiety, depression, and insomnia 2-3 times more often than the rest of the population.

FACTS about Connecticut Women

demographics

Grandparents Raising Grandchildren

The number of children in Connecticut and the United States who are being raised by their grandparents continues to increase. According to 2000 Census figures, 39,797 children under the age of 18 (9.7%) are living in grandparent-headed households.² This is an increase of 27.4%, or 8,561 children since the 1990 Census figures.³

Connecticut ranks 31 (out of 50 states plus the District of Columbia) in the percentage of children under the age of 18 living in grandparent-headed households. The District of Columbia tops the list with 14.5% and the state of North Dakota ranks 51 with 2.4%. The national average is 6.3%.⁴

As of April 1, 2000, 19,928 grandparents in Connecticut are responsible for raising their grandchildren.⁵

FACTS about Connecticut Women

Chapter Two

Women in the Labor Force

chapter two

page 25

FACTS about Connecticut Women

women in the labor force

Labor Force Participation

The overall percentage of women in the paid labor force has decreased slightly within the state of Connecticut. In 1970, 45.6% of all Connecticut women age 16 and over were in the labor force.¹ This figure rose to 55.4% in 1980² and then to 60.9% in 1990³ and fell to 57.6% in 2000.⁴

In 2000, 75.3% of all women in the Connecticut labor force were white. African American women made up 13.3% of the female labor force. Women of Hispanic origin made up 8.2%, while Asian and Native American women made up the remaining 2.9 and .3% of the female labor force, respectively.⁵

The number of mothers in the paid labor force continues to rise both within the state of Connecticut and across the country. In 1970 only 27% of mothers with young children participated in the labor force, 41% in 1980 and 60.8% in 1990.⁶ This number grew in 1997, with 71.9% of women with children younger than 18, 77.9% of women with six to 17 year-olds and 64.8% of women with children younger than six working in the labor force.⁷

¹ 1970/1980 Censuses, *Social & Economic Characteristics*.

² 1980 CT Census Data, *General Social and Economic Characteristics*, Table 61.

³ Population Reference Bureau, *What the 1990 Census Tells Us About Women: A State Factbook*.

⁴ Extrapolated from 2000 Census Data, Profile of Selected Economic Characteristics, CT: 2000, Table QT-03, and Age Groups and Sex, CT: 2000, Table QT-P1. The 2000 census tracts women aged 15-19, versus previous census years in which the grouped category started at age 16, consequently this statistic includes 15 year old women which could contribute to the slight decrease in women participating in the labor force.

Work Arrangements

Between the late 70's and the late 90's, Connecticut married couples with children increased their work effort by nearly 12 weeks of full time work per year.¹ During that same period, Connecticut single parent families also markedly increased the average number of hours worked each year by nearly eight weeks.² Throughout this period, Connecticut families worked more than comparable families nationally.³

In 1998-1999, the majority of Connecticut female workers, 67.6% work full-time jobs, 24.5% work part-time jobs, 6.8% are self-employed and 1.1% work for temporary help agencies.⁴

FACTS about Connecticut Women

Labor Force Participation continued

Glass Ceiling-National

The “glass ceiling” has come to mean an invisible but virtually impenetrable barrier between women and the executive suite, preventing them from reaching the highest levels of the corporate world regardless of their accomplishments and merits. The term refers to the specific attitudinal and organizational barriers that severely limit opportunities for the upward mobility of qualified women candidates.¹

In 1995, the Glass Ceiling Commission conducted important research regarding women in the paid labor force.² The federal bipartisan commission was established to study the artificial barriers that impede the advancement of women and minorities into the higher levels of most major corporations and businesses.

Their findings include the fact that 95 to 97% of the senior managers of Fortune 1000 industrial and Fortune 500 companies are male and 97% are white. Furthermore, when women and minorities are in these positions they are paid less than their white male counterparts. The Commission found that societal barriers (prejudice, bias, unequal educational opportunities), internal structural barriers (insufficient recruitment, lack of mentoring, differential standards for performance evaluation) and government barriers (inconsistent law enforcement, inadequate reporting) all play a part in preventing the advancement of women and minorities in these corporations.

While there is some indication that women managers are doing better than they were in the past, the glass ceiling remains firmly in place. For example, in 1999 women made up 46.5% of the workforce; however, they represented only 12% of all corporate officers.³

In 2002, the U.S. General Accounting Office (GAO), per the request of Representatives Dingell and Maloney, compiled data from the Current Population Survey (CPS) to determine how women in management progressed between 1995 and

FACTS about Connecticut Women

women in the labor force

Labor Force Participation continued

Glass Ceiling-National continued

2000, and to understand the continuing impact of the glass ceiling on women's advancement.⁴ The GAO reported that despite a sense of continued progress toward gender equality in the workplace, the majority of women managers were worse off, relative to men, in 2000 than they were in 1995. This increase in the wage gap during this time period is particularly troubling because it was a time of overall economic prosperity.

In ten industries employing 71% of U.S. women workers and 73% of U.S. women managers, the data show that women managers continue to lag behind their male counterparts in both advancement and pay. The key findings indicate: 1) full-time women managers earned less than their male counterparts in both 1995 and 2000; 2) in 7 of the 10 industries, the earnings between full-time female and male managers actually widened between 1995 and 2000; and; 3) in only 5 of the 10 industries reviewed do women hold a share of management jobs proportionate to their share of the industry workforce. Thus, women's record presence in the workforce is not matched by their presence in the more influential and economically advantageous positions.

Advancement is often constrained by the time women take out of the workforce to raise their family; men rarely take this time. The CPS data suggest that combining parenthood with advancement into management is particularly difficult for women. Female managers, especially those with children under 18, are more likely to work part-time than their male counterparts, which makes advancement more difficult. Part-time workers tend to be seen as secondary employees and therefore not as important to a company's worth or growth.

Top 100 Public Companies in Connecticut

Boards of Directors

The PCSW surveyed the Top 100 public companies by annual revenues in Connecticut as reported by the Hartford Courant in the summer of 2001. Of these 100 companies the PCSW was able to gather data about the diversity of Boards of Directors from 83 companies. Of these 83 companies 49 companies (59%) did not have any women on their boards of directors. The businesses surveyed are (in order of their size):

1. General Electric Company
2. Aetna, Inc.
3. United Technologies Corporation
4. Xerox Corporation
5. Tosco Corporation
6. The Hartford Financial Services
7. Northeast Utilities
8. Praxair, Inc.
9. Oxford Health Plans, Inc.
10. Ames Department Store
11. Pitney Bowes, Inc.
12. Emcor Group
13. Crompton Corporation
14. United Rentals, Inc.
15. The Stanley Works
16. Terex Corporation
17. Silgan Holdings, Inc.
18. Citizens Communication
19. W. R. Berkley Corporation
20. Olin Corporation
21. UST, Inc.
22. Crane Co.
23. IMS Health, Inc.
24. Hubbell, Inc.

Senior Management

Of the Top 100 Companies we were only able to collect information on only 84 companies. Of the 84 companies, 50 (59%) had no women in the top management. Information collected on senior management was based on the top 5 positions of the company because of varying management structures.

The majority of the positions were Chief Financial Officer, Chief Executive Officer, Chief Operating Officer, Presidents, Vice Presidents, Senior Vice Presidents, and Executive Vice Presidents. The five positions were determined by the order in which the company listed them on the survey, and also the order in which they were listed in annual reports or on official company websites.

The following is a ranking of the companies based on percentage of women in management and then the companies ranking based on the Hartford Courant's Ranking.

Ten CT Public Companies Having the Highest Percentages of Women in Senior Management (by annual revenues) in CT

Company Name	% Women in Senior Management
Pitney Bowes (11)*	50%
Xerox Corporation (4)*	40%

Unemployment

Since 1979, Connecticut's unemployment rate has been lower than the national average, and among the lowest of all states. It has dropped from 5.1% in 1979 to 3.7% in 1989, to 2.3% in 2000.¹ In November 2000, Connecticut's unemployment rate reached an historic low of 1.7%.² Since March 2001, Connecticut's unemployment rate has been increasing. In December 2001, Connecticut's seasonally-adjusted unemployment rate was 3.6%, compared to 3.2% in July 2001, 3% in June 2001 and 2.2% in June 2000.

Unemployment rates for women tend to be similar to unemployment rates for men. Overall, rates are lowest for whites and highest for people of color. As of December 2001, Connecticut had an average unemployment rate of 3.1, of which women represented 43.6% and minorities 34.2%. A specific breakdown of unemployment rates for whites, blacks, and Hispanics in Connecticut is described in the following chart. Data for individuals of other racial/ethnic backgrounds are not available. The duration and reason for unemployment for Connecticut women are also described in separate charts.

Underemployment³

Connecticut workers aged 18-35 with less than a high school education are twice as likely to be under-employed than same-aged workers with a high school diploma. Compared to national averages, under-employment in Connecticut is less common among female workers and more common among male workers. This gender difference is particularly great among workers with less than a high school education.

Pensions and Retirement

There has been a steady increase in employers offering pension coverage over the years. Connecticut ranks higher than the national average for pension coverage as a whole as well as for pension coverage for women. In 1997-99, 53.8% of Connecticut employers provided pensions, as compared to 48.7% nationally.¹ In this same time period, 52.5% of Connecticut women had pension coverage compared to 46.5% of women nationally.

Despite this increase in pension coverage, gender differences in pension coverage exist primarily due to the fact that women earn less during their working years, and are concentrated in low-wage, service, part-time, non-union, and small firm jobs where pension coverage is less common. Women are also more likely to take time out of the labor force for child raising or other caregiving responsibilities. Pension benefits are often lost or significantly reduced as a result of these "breaks in service." Of workers retiring in 1996, the median woman had worked 27 years over her lifetime, while the median man had worked 39 years.² In 1998, 25.8% of female workers worked part-time, compared with 10.6% of male workers. Women represented 67.5% of all part-time workers.³ Most pension plans require at least 5 years to earn a right to a benefit. However, women stay at a job an average of 3.8 years as compared to the average of 5.1 years for men.⁴

Racial differences in pension coverage also exist. Minorities have seen a decrease of pension coverage over the years. A specific breakdown of pension coverage for minorities in Connecticut and nationally are described in the following chart.

Social Security is the only source of income for many older women. Social Security is the only source of income for 25% of unmarried women, 9% of married

women in the labor force

Wages and Job Fields

Since the signing of the Equal Pay Act in 1963 the wage gap has narrowed by only a third of a penny per year.¹ In 1963, women earned 59 cents for every dollar that men earned, while in 1999, women earned 72 cents on the dollar.² In 1999, the median annual wages of male full-time workers was \$36,476, whereas the median annual wages of female full-time workers was \$26,324³ - representing a 72% wage gap. The combination of sex and race/ethnicity discrimination widens the wage gap. In 1999, white women earned 70.2% of what white men earned; black women earned 62.3%; Latina women earned 48.1%; black men earned 76.3%, and Latino men earned 60.2%.⁴

Education does not eliminate the wage gap. According to statistics gathered by the U.S. Census Bureau regarding 1999 median annual earnings, on average, a white woman with a Bachelor's degree earns slightly less per year than a white man with only a high school diploma, and, a Latina woman with a Bachelor's degree earns \$3,165 less per year than a white man with only a high school diploma.⁵

Connecticut women earn more than the national average, however, in 1998, women in Connecticut earned approximately 75 cents for every \$1 earned by men, or an average of \$193 less per week or \$10,011 less per year.⁶

Like the rest of the country, the Connecticut labor force tends to be segregated by gender. Women and men are usually concentrated in separate fields and different types of occupations. The segregated labor force is problematic for women and their families as the jobs traditionally held by females often pay less than those occupations dominated by men. Even when men and women work in the same fields, women earn less. Job segregation and a lower median income are issues for Connecticut women who work for the state as well as the private sector. In 1997, 43.7% of Connecticut women worked in the sales and administrative sector,⁷ and 16% worked in the service sector.⁸ In 2000 this number increased to 49.5%.⁹

Jobs dominated by women have been historically undervalued and continue to be underpaid. According to a study conducted by the Women's Institute for a Secure Retirement, jobs held predominately by women were paid between 17-20% less than those comparable jobs held predominately by men.¹⁰

Family & Medical Leave

The Family and Medical Leave Act requires many employers to provide unpaid job-protected leaves to employees for the birth or adoption of a child, or the serious illness of the employee or a family member. The Connecticut Department of Labor, Wage and Workplace Standards Division annually compiles the reports of private Connecticut companies with 75 or more employees.

Over the years families have increased their use of FMLA leave, despite the economic hardship of doing so without pay. In 1993, 1,543 companies reported a total of 17,181 family or medical leaves taken by employees. In 1994, this number rose to 1,578 companies reporting a total of 18,174 leaves, and in 2000, 1,991 companies reported a total of 23,378 family or medical leaves taken by employees.

The following charts track in detail the number, purpose and duration of leaves from 1993 to 2000.

Child Care

Families in every income bracket are becoming more reliant on childcare in order to participate in the labor force. The number of working mothers who need childcare has increased dramatically. In 1970, only 27% of Connecticut mothers with children under age six were employed outside the home; in 1995, this number increased to 65%.¹ In 2000, approximately 148,271 families in Connecticut had children under the age of six.² (There are 223,344 children in the state of Connecticut under the age of five.³)

In 2001, Connecticut's licensed childcare system could only serve 40% of the children from birth through five years old: center-based care provided for 32% of the slots with an additional 8% in licensed family/home based programs.⁴ Immediate family relatives care for nearly 60% of children of working parents from birth through five years. Combined, this translates into childcare slots of 123,507 in 1998, 124,506 in 1999, and 111,120 in 2000.⁵ In addition, the number of reported requests to Infoline for childcare has steadily increased over the years, as shown in the following charts.

Affordable childcare continues to be elusive for many Connecticut women. Even for families earning an average self-sufficient income in Connecticut (about \$47,000), child care fees for one child can expend from 25% to more than 40% of their annual gross income.⁶

Quality child care is also elusive because of the high teacher turnover rate. Research indicates that much of this problem is rooted in the low wages paid to childcare providers. Child care wages have not risen in real dollars over the last decade and only a small percentage of workers have employer paid health benefits.⁷ The child care profession is a female-dominated profession that has historically been undervalued and underpaid. Currently, 26,000 Connecticut residents are early childhood educators.⁸ In 1999, the median annual earnings of full-time

FACTS about Connecticut Women

women work and family

Women, Work and Family continued

Child Care continued

childcare educators in Connecticut, even those with bachelor's and master's degrees, was \$18,630.⁹ This is just 5% over the poverty level for a family of 4,¹⁰ and less than half of the self-sufficiency standard for a family of 4.¹¹ Due to the low wages, the turnover rate of childcare educators ranges from 25%-50% a year.¹² It is estimated that an additional 8,000 childcare educators will be needed in the next two years to satisfy the demand in the state.¹³ This increase in demand comes at a time when the field is already struggling with a staffing crisis.

Sexual Harassment

The Commission on Human Rights and Opportunities (CHRO) has a statutory responsibility to enforce human rights laws prohibiting illegal discrimination in employment, housing, public accommodations and credit transactions. It is the state enforcement agency responsible for the investigation of sexual harassment claims.

The following data describe the incidence of sexual harassment in Connecticut in terms of "cases" filed each year. A multi-year comparison is shown.

Sexual Harassment Cases Filed with the Connecticut Commission on Human Rights and Opportunities FY 93-94 to FY 96-97			
Year	Employment Cases Filed with CHRO	Sexual Harassment listed as one basis for a complaint alleging Sexual Harassment	% of Employment Cases Filed
97-98	3,746	261	7%
98-99	3,568	255	7.2%
99-00	3,346	244	7.3%

Women and Violence

Family Violence

Family violence arrests in Connecticut increased 3.1% in 2000 from 1999. In 2000 there were 19,536 incidents resulting from arrest reported by Connecticut law enforcement agencies.¹

Family violence arrests over a five-year period are as follows: ²

1995 – 19,467

1996 – 18,653

1997 – 19,830

1998 – 18,986

1999 – 18,948

Three-fourths (76.2%) of all victims were female. In 4,511 (23%) of the offenses all involved parties were arrested, compared to 22% in 1999. A Temporary Restraining Order issued by the civil court, or a Protective Order was known to have been previously issued in 3,198 incidents.³

In the year 2000 in Connecticut there were 25 family violence homicides and the majority 20 (or 87%) of the offenders in these homicides were men. This represents an 8.7% increase from 1999. The majority of the victims of family violence in 2000 were women (15-60%) and the age range of these victims was 20 to age 94. Five of the homicides involved spouses, and four involved unmarried people living together. Guns were used in 85.7% of the murder/suicides. The female partner's attempt to end the relationship was a characteristic common to several of the murder-suicides.⁴

Women-Owned Businesses in CT

As of 2002, there are an estimated 78,366 majority-owned, privately-held businesses in Connecticut in which women own the majority of the business, accounting for 27% of all privately-held firms in the state.¹

Women-owned firms in Connecticut employ nearly 76,000 people and generate over \$8.2 billion in sales.² Between 1997 and 2002, the Center for Women's Business Research estimates that the number of women-owned firms in Connecticut increased by 8%, employment decreased by 4%, and sales decreased by 11%.³ Among the 50 states and Washington, D.C., Connecticut ranks 26th in the number of women-owned firms in 2002, 35th in employment and 36th in sales.⁴

Connecticut's percentage of women-owned businesses is nearly identical to the percentage in the United States. Twenty-six percent of businesses in Connecticut are owned by women while 25.5% of businesses in the United States are owned by women.⁵

State Purchasing

The law enacting the Set-Aside Program for Small Contractors, Minority Business Enterprises, Individuals with Disability and Nonprofit Corporations requires each state agency to establish and implement on an annual basis a contracting program for small contractors and minority business enterprises. The law requires each agency to establish an agency goal of not less than 25% of the total projected contracting in each fiscal year to be directed to companies that are certified to be small contractors. Of that amount, 25% (or 6.25% of the total agency contracting) must be directed to businesses that are certified to be minority business enterprises.

The law defines a small contractor (SBE) as a company that has been in business for at least one year, has its principal place of business in the State of Connecticut and whose prior year gross revenues does not exceed \$10,000,000. A minority business enterprise is defined as a small contractor, which is 51% owned, controlled, and operated by a minority person or persons. For purposes of this law, the term minority includes persons who are Black, Hispanic, Native American, Asian American, Women, and/or have origins in the Iberian Peninsula. The law additionally defines a business that is owned by an individual with a disability to be eligible as a minority business enterprise.¹

The Commission on Human Rights and Opportunities also has the responsibility, pursuant to CSG 46a-56(a)(6), to report to the legislature on an annual basis about the level of participation of minority and women-owned businesses in state contracts as a result of the state affirmative procurement requirements.

FACTS about Connecticut Women

Women-Owned Businesses in CT continued

State Purchasing continued

Total state agency purchasing and contracting for the FY 1999/2000 year was \$2,091,958,585. Minority business enterprises (MBE) and women business enterprises (WBE) received \$125,189,362 (6.0%) of that total. The percentage of total contract awards to MBE and WBE contractors for FY 1999/2000 was found to be 0.2% lower than that reported for fiscal year 1994/1995.

Five state agencies account for the majority of expenditures by the state for construction and construction-related services. These agencies had expenditures totaling \$660,772,682. This represents 32% of total state spending. MBE and WBE participation within that total was \$78,739,521 (11.9%). Of that amount, \$36,050,614 (5.5%) was with MBE contractors and \$42,688,907 (6.5%) was with WBE contractors.

State agency purchasing and contracting for supplies and services was \$1,431,185,903. This represents 68% of total state spending. MBE and WBE participation within that total was \$46,449,841 (3.2%). Of that amount, \$10,002,724 (0.7%) was with MBE contractors and \$36,447,117 (2.5%) was with WBE contractors.

Political subdivisions of the state reported total expenditures of \$29,291,620. MBE and WBE participation within that total was \$1,067,011 (3.6%). Of that amount, \$406,383 (1.4%) was with MBE contractors and \$660,628 (2.3%) was with WBE contractors. Fourteen political subdivisions of the state failed to submit a report, despite a written request from the Commission on Human Rights and Opportunities.

Political Participation

CT State Government

Since Ella Grasso was the first woman elected governor in her own right, at least one female has held every statewide office in Connecticut.¹ Currently, women hold a majority of statewide constitutional offices, 4 out of 6. The offices held by women in 2002 are: Lt. Governor, Secretary of the State, Comptroller and Treasurer.²

Women make up 31% of the 2002 Connecticut State Legislature. They are 22% of the State Senate and 33% of the House of Representatives. In the Senate, women comprise 8 of the 36 members, and women hold 49 of the 151 seats in the House of Representatives.³

Speaker of the House of Representatives, Moira K. Lyons of Stamford, is the first woman elected to that position in Connecticut. Currently, no other state has an elected female Speaker of the House, down from nine other states just two years ago.¹

Combining Senate and House, Connecticut ranks well (top 10 states) compared to other states in the percentage of women holding leadership positions (16.7%), committee chairships (32.0%) and overall number of women elected to the General Assembly² (31%).

Connecticut ranks poorly however, in the number of women appointed as “policy leaders.” Those defined as policy leaders by the Center for Women in Government and Civil Society include heads of departments, agencies, offices, boards, commissions, top authorities and top advisors in the Governors’ office. Of the fifty states, Connecticut is only ranked 38th, although this is an improvement over the past five years.³

Women and Their Health

Connecticut ranks 11th among the states for smoking rates within the total population, and smoking is an increasing health problem among women and girls in our state. For example, smoking rates among high school girls have increased almost 30% since 1991. In 1999, one in every three female students smoked. Among the female high school students in the state, 26,000 admitted to smoking regularly and 2,100 reported using smokeless tobacco.

CT US CT US

Smoking leads to deadly diseases, and women are the victims of 39% of all smoking related deaths.

- For example, smoking accounts for 87% of all lung cancer cases. It is the second most common cancer in Connecticut and the leading cause of all cancer deaths. Since 1973 the incident rate for lung cancer more than doubled for women, while falling 4.8% for men.

page 116

FACTS about Connecticut Women

Women and Their Health continued

Smoking continued

- Heart disease is the leading cause of death for women, and smoking doubles the risk.
- Women also experience increased risks of osteoporosis and cervical cancer, bronchitis, emphysema, and the flu.

Smoking causes other gender specific risks, such as pregnancy complications and other risks to reproductive health. Yet, one in five pregnant women are addicted to tobacco.

Average Rates of Pregnancy Related Risks Caused by Tobacco Addiction

New Research also shows that women are more likely to become chemically dependent upon cigarettes and that women ages 12-24 are more likely to be unable to cut down than men the same age. As many as 165,000 women die each year in the United States because of tobacco-caused diseases.

Causes of Death Among Women in CT

The three leading causes of death among all women in Connecticut are cardiovascular disease, cancer and cerebrovascular disease (most commonly, stroke). Women of different racial and ethnic backgrounds have significantly different mortality rates for some of these conditions. For example, the following charts show the mortality rates for cardiovascular disease, cancer and cerebrovascular disease among women of different racial/ethnic groups in Connecticut. (Certain racial ethnic groups are not shown if the incidence was so small in Connecticut that it does not show a statistically valid rate.)

- Cancer is the second leading killer among all women, and is especially severe among the Hispanic population; the incidence is lower than white women but they are more likely to die from it.
- Between 1996-1998 lung cancer killed 2,378 Caucasian, 119 African American, 5 Asian American, 1 Native American, and 25 Hispanic women.
- Also between 1996-1998, 101 Caucasian, 22 African American, 2 Asian American, 2 Native American, and 11 Hispanic women fell victim to cervical cancer.
- For the same years breast cancer killed 1,653 Caucasian, 135 African American, 5 Asian American, 1 Native American, and 33 Hispanic women in Connecticut.

Teen Pregnancy

Teenage pregnancy rates are decreasing slowly. As many as 85% of all teenage pregnancies are unintended. Since 2000, the birth rate for females age 15-19 in Connecticut has been at a record low: 48.7 births per 1,000 females. However, this rate only represents a 3% decrease since the early 1990s. Nationally the number of teenage births has decreased 10% since 1991. Despite these declines the United States continues to have a teen birth rate that is among the highest of all developed countries.¹

FACTS about Connecticut Women

Women and Their Health continued

Teen Pregnancy continued

Connecticut has coordinated pregnancy prevention in all public schools. They offer sex education about HIV/AIDS, sexually transmitted diseases and contraception. Births to teenage mothers affect the baby, the mother, and the community:

- Children of teenage mothers are often at low birth weight, experience health and developmental problems, and are frequently poor, abused, and/or neglected.
- Teen mothers are less likely to graduate from high school and more likely than their peers who delay childbearing to live in poverty and to rely on welfare.
- Teen pregnancy poses a substantial financial burden on society. It is estimated that \$7 billion is lost annually in tax revenues, public assistance, child health care, foster care, and involvement with the criminal justice system. Teen pregnancy poses a substantial financial burden on society. It is estimated that \$7 billion is lost annually in tax revenues, public assistance, child health care, foster care, and involvement with the criminal justice system.

Uninsured Women

At 8.5% Connecticut currently has the 5th lowest percentage of uninsured persons, following Rhode Island, New Hampshire, Wisconsin and Pennsylvania.

Percentage of Connecticut Residents With No Health Insurance Coverage Throughout the Year

	2000	1999	1998
Connecticut	8.5%	9%	10.9%
National Average	14%	14.3%	15%

Source: U.S. Census Bureau, Current Population Survey, March 1999, 2000, and 2001; and State Health Access Data Assistance Center (SHADAC).

There are inequities remaining however in the populations within Connecticut that remain uninsured. For example, among the non-elderly population the problem is more acute. According to the Urban Institute and the Kaiser Commission on Medicaid and the Uninsured, the rate average over 1997-1999 by gender in Connecticut is 14% for men and 12% for women. And, if we look at race in this non-elderly population, people who are Black and Hispanic are more likely to be uninsured:

Women in Prison

The Janet S. York Correctional Institution located in Niantic is the only women's prison in Connecticut. It is classified as a level 5 facility (highest security level); however, it houses women of all offenses ranging from level 1 to 5 as well as women awaiting trial who cannot afford bail.

In 1990, 595 women were incarcerated in Connecticut. At the beginning of 2002 1,239 women are serving time in prison. This reflects a 52% increase in 12 years. The male population increased 40 % in the same period of time.

Female inmates come from all towns in Connecticut.

As of January 1, 2002, the greatest proportion of women incarcerated in Connecticut were convicted of offenses in the category called public order (34.5%). This includes offenses such as civil disobedience, contempt of court, disorderly conduct, drug related offenses, public nuisance, traffic offenses, vagrancy, and victimless crimes.² Substance abuse was the next highest percentage (23.0%), with crimes against persons (22.9%) and property (13.8%) ranking next.³

Of the 1,239 female inmates, 67.3% have dependents. In the mid 1990's, this figure was as high as 80%. Of the current inmate population, 39.5% have one to two dependent children.⁴ Studies show that children of inmates are often psychologically traumatized and, as a result, five to six times more likely than their peers to be incarcerated.⁵

As many as 48.9% of women incarcerated in Connecticut have not finished high school. The percentage of female inmates who possess a high school degree is 51.5% and the percentage with some college education is 14.5%.⁶

Most of the women in prison as of January 1, 2002 were women of color (64.7%). The population, overall, is 41% African-American, 35.3% white, and 24% Hispanic women⁷

FACTS about Connecticut Women

Women in Prison continued

Over the past 12 years, women in the age categories of 31-35 years and 36-45 years have been the largest age groups in Connecticut prisons. On average, these two groups have made up almost half of female inmates (the highest being 53.6% in 1999 and the lowest being 38.7 in 1991).⁸

In 2001, 3,194 pre-trial female admissions to the Department of Correction were counted. Of these, 393 remained in the accused status, 1,946 were eventually discharged, and 855 were sentenced. For those having disposition, it took an average of 26 days to either be sentenced or discharged.⁹
